

## Step by Step Instructions for Basic Git

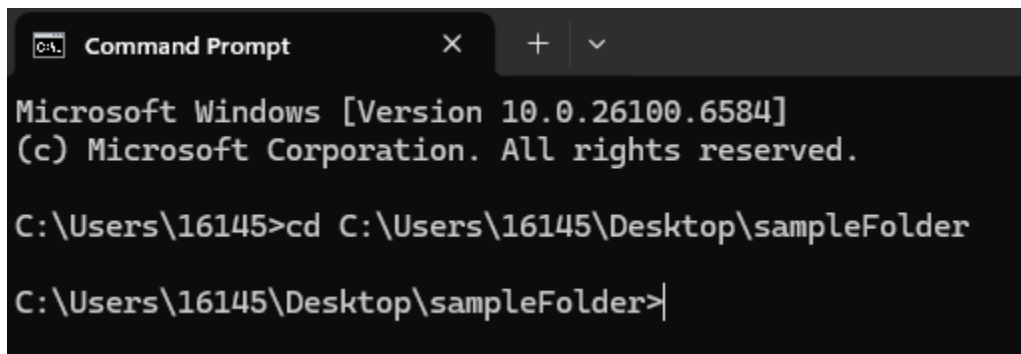

1. If you haven't already, download git from the following link – make sure you check the box saying “Add Git to PATH”

<https://git-scm.com/downloads>

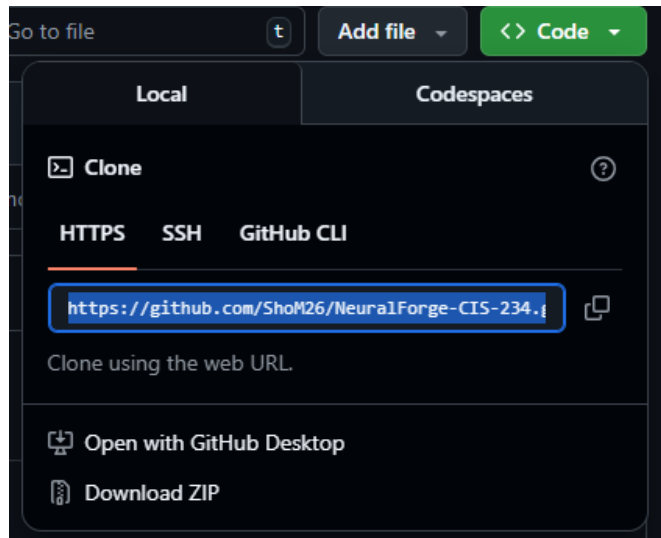

2. Create a new folder on your desktop and give it any name
3. Open that folder you just made
4. Copy the folder path

5. Navigate to the terminal/command line (type cmd in the search bar and open command prompt)
6. Type “cd <path you copied>” and hit enter
7. You should see your folder name next to the carrot here

8. Open the github repository link <https://github.com/ShoM26/NeuralForge-CIS-234>
9. Click the green code button and copy the link

10. Type “git clone <link you copied>” and press enter

## Next: Creating a feature branch and pushing it

1. In the command line make sure your main branch is up to date by typing the command “git pull”
- 2.
